The D-2 Bird of Prey replaced the D-3 Bird of Prey by 2200 and the Raptor class by 2251.

This ship uses variable-position wing assembly that is kept horizontal for cruising, raised to serve as airfoils in a planetary atmosphere or to attack. Possessing atmosphere landing capability. This allows the ship to transport expeditionary forces as a base of operations during planetfall operations. This ship will be replaced by the toQDuj (Type I)-class Bird of Prey by 2255.

First sighted by Starfleet November 2154
