Iltharanos

**Starfleet Avenger-class**
*Light Explorer; Commissioned 2401*

**HULL DATA**
- Structure: 40 (5 ablative) [99 space] [0 space remaining]
- Size/Decks: 7/24
- Length/Beam/Height: 572/254/75 meters
- Complement: 240

**TACTICAL DATA**
- Phasers: Type XII (x4/BB) [-28 space]
- Penetration: 8/7/7/0
- Torpedo Launchers: Mk 105 DF (x2/BB) [-16 space]
- Quantum Penetration: 8/8/8/8/8
- Deflector Shields: FSS-2 (F) [-20 space]
- Protection/Threshold: 20/7

**PROPELLION DATA**
- Impulse System: FII (.9c) (DD) [-8 space]
- Warp System: LF-50 Mod 1 (9/9.5/9.994) (E) [-8 space]

**OPERATIONAL DATA**
- Atmosphere Capable: No [0 space]
- Cargo Units: 70 [0 space]
- Cloaking Device: No [0 space]
- Life Support: Class 5 (F) [-8 space]
- Operations System: Class 5 (F) [-8 space]
- Sensor System: Class 5a (+5/+4/+3/+2/+1/EE) [-6 space]
- Separation System: No [0 space]
- Shuttlebay: 1 ad, 1 av [-4 space]
- Shuttlecraft: 14 size worth [-2 space]
- Tractor Beams: 1 fv, 1 ad, 1 av [0 space]
- Transporters: 3 standard, 3 emergency [0 space]

**MISCELLANEOUS DATA**
- Maneuver Modifiers: +2C, 0H, +3T
- Traits: Enhanced System (Warp, +.2), Prototype (+2 warp) [+9 space]
  - Ablative Armor, Intricate System (Propulsion)
BACKGROUND

The Avenger-class light explorer continues the design philosophy of Starfleet in the last three decades, a continued emphasis on exploratory ships that are both fast and more than capable of defending themselves. As is standard with most Starfleet vessels of its time period, the Avenger-class is equipped with ablative armor, bioneural circuitry, and a full payload of quantum torpedoes. The class comes standard with the extremely powerful type XII phaser array, deemed a necessity by the Advanced Starship Design Bureau, to keep Starfleet on par with emerging hostile powers such as the Taurhai Unity which has overrun large portions of the former Romulan Star Empire. The Avenger-class is also the first starship to feature the Type 24 shuttle and Battosai-class fighter.

Originally the Avenger-class was to feature Starfleet's first domestically-produced and reliable quantum slipstream drive, but difficulties with the technology resulted in the FTL specs for the class being modified to include a more standard warp drive. Starfleet engineers instead equipped the Avenger-class with an experimental warp drive prototype capable of FTL speeds in excess of 9700c, a speed nearly five times the maximum rated speed of the old Sovereign-class starships. The warp drive is temperamental, however, and is difficult to repair once damaged.

The first Avenger-class starship left drydock at the Antares ship yards in 2401, and within the first two years nearly a dozen other ships of the class have been fielded, with an additional two dozen more estimated to be complete by the end of the decade.

SHIPS IN SERVICE
