**Mission**

The Lakota refit is just the latest set of refits to the venerable Excelsior-class starships, with the purpose of providing as much firepower as possible onto the Excelsior frame.

**Features**

The Lakota features type IX phasers, increased shield capacity, and a full payload of quantum torpedoes. The ship is heavily armed and is fully capable of outgunning similar and even larger starships from threat species. If there is a weakness in the Lakota, it is that it lacks somewhat in the sensors department.

**Background**

The Lakota is a direct response to the threat of the Dominion. It is far easier for Starfleet to refit a proven space design than to conduct research and development into a new class or classes of starship to combat the Dominion.
