Notes:
The Odyssey class is the largest vessel ever created by Starfleet. Its massive size makes it very resilient. The Odyssey's unique split saucer pylon reduces subspace wake left by the starship while travelling under slipstream drive, allowing the ship to remain in slipstream for twice as long as normal. The Odyssey is designed as an extreme long-range vessel, and can operate for long periods of time away from support. Because of this, it is the most versatile cruiser ever developed by the Starfleet Corps of Engineers.

The Odyssey-class features the ability for saucer separation much like the Galaxy-class. The chevron-shaped saucer section can be separated from the stardrive section, allowing greater maneuverability to the stardrive section. The chevron section can be reattached to the stardrive section at any time.
